E-mail: editorijceo@gmail.com, mauryarp\_bhu@yahoo.com

Dear Friends  
Season's Greetings!!

Welcome to another issue of International Journal of Ocular Oncology and Oculoplasty. Oculoplasty is rapidly evolving sub-speciality. The effective global communication of new information's and further research need journals of this speciality but there is scarcity of journals related to ocular oncology and oculoplasty in our country. IJOOO will serve the purpose in this field.

We are completing second year of the journal and time has come to review the progress of IJOOO. Much progress has been made with IJOOO including fast track services for publication of articles, as most of the researchers want their work to be published at the earliest. Now IJOOO is indexed and obstructed with Index Copernicus (with IC Value 43.37), one of the bibliographic index system recognized in MCI guidelines. We are under the process of Medline and Scopus indexing system. There is blind ended review process to access the quality of articles. We adopt the policy of open assess. Full texts of all issues are uploaded on our website [www.innovativepublication.com](http://www.innovativepublication.com) and assessable from all parts of world. We are fortunate to have talented members in our editorial board. Recently many experts of international repute like Dr. Hirohiko Kakizaki & Dr. Yoshiyuki Kitaguchi from Japan, Dr. Yunia Irawti from Indonesia, Dr. Joseph Manuel CRUZ from Philippines and Dr. A. Kaur & Dr. Lakshmi Mahesh from India joined the editorial board.

In this issue, we have interesting articles on ocular involvement in Renal carcinoma by Daniel Moreno Paremo from Mexico, Complications of ptosis surgery by Dr. Abdullah Al Mujaini from Oman and Orbital cysticercosis by Dr. Apjeet Kaur and rare /interesting case report of Mesectodermal leiomyoma of ciliary body by Dr. Mahesh P Sambugam and Inverse bells phenomenon following sling surgery by Dr. Amar Agrawal.

We are pleased to inform you that March 2017 issue will be special issue on **Ocular Oncology**. I would like to request all fellow oculoplastic surgeons to join us in publishing their valuable scientific research articles and make our journey successful and useful to our patients and young researchers.
